

DeepSec welcomes Digital Guardian as Sponsor for 2017

Posted on **May 11,2017** by **lynx**

No event can be done with supporters, and so we welcome [Digital Guardian](#) as sponsor for the upcoming [DeepSec 2017 conference](#)! If you have data in your organisation, then you might be interested in talking to Digital Guardian's experts, because they know a lot about what data does, where it lives, what endpoints really are, how you protect it, and how you keep exclusive access to it. Since data is code on most computing architectures, there's a double benefit.

Digital Guardian is a next generation data protection platform purpose built to stop data theft. The Digital Guardian platform performs across the corporate network, traditional endpoints, mobile devices and cloud applications to make it easier to see and stop all threats to sensitive data. For more than 10 years, it has enabled data-rich organizations to protect their most valuable assets with an on premise deployment or an outsourced managed security program (MSP). Digital Guardian's unique data awareness and transformative endpoint visibility, combined with behavioral threat detection and response, enables you to protect data without slowing the pace of your business.

So if you want to protect your digital assets and still be able to work with them, you should take advantage of the opportunity of meeting the data protection experts at DeepSec 2017. They also have a contingent of sponsored tickets, so go and talk to them to make an appointment.
